ENcome Energy Monitor 2.0

Keep an eye on your photovoltaic installations - whenever you want and wherever you are! The new **ENcome Energy Monitor 2.0** allows you real time access to all relevant operating data of your plants, whether from your office or from the road. Amongst others you might see the momentary weather at the plant locations, the produced electricity or the actual revenue generated by your installations. Compare your photovoltaic plants amongst each other or with exemplary installations in different regions. Make use of secure historic data to investigate the performance of plants over a longer period of time. An installation is not delivering the expected yield at a certain moment? You can immediately see the financial impact on your portfolio and the monitor informs you about the reasons identified by ENcome's experts.

Your plants are already connected to an existing monitoring solution? No problem, the **ENcome Energy Monitor 2.0** can be installed parallel to existing solutions without interfering with them.

Your benefits:

- The first monitor that is optimally designed for your specific needs as an investor
- Check at one glance the current irradiation and energy production of each individual plant in your portfolio
- Compare your plants' yields amongst each other and with your business plan
- Use the ENcome Energy Monitor in parallel to your existing monitoring solution if required
- Use the new smart filter and keep track of your plant portfolio

Technical Data:

- Attractive web interface: independent of operating systems, supports mobile devices, touchscreen design
- Flexible and easy to configure
- Multi-language
- Easy to connect to installed hardware (e.g. inverters, data loggers)
- SSL-encoded access optimally secures your data
- Maximum reliance and safety by using redundant, top-modern data centers
